The Grammar of Body-Directed Action Verbs in Kwak’wala

Katie Sardinha
Independent researcher

Abstract: This essay explores the grammar of body-directed action verbs like kusa ‘to shave’ and ḥagwtsud ‘to dress’ in Kwak’wala. Topics covered include the formation of reflexive and transitive sentences, implicit objects, and the use of body part suffixes.

Keywords: reflexives, transitives, body part suffixes, Kwak’wala, Wakashan

1 Body-directed action verbs

The verbs in Table 1 can all be used to describe actions that are directed at the body.

Table 1: Some body-directed action verbs in Kwak’wala

1 After body part suffixes, the suffix -(x)’id takes one of the forms {d-, ud, -nd} according to a complex set of rules (Boas 1947:365). Contemporary speakers also tend to omit d when this segment is syllable final.

Papers for the International Conference on Salish and Neighboring Languages 55.
The rest of this essay will describe basic features of the grammar of these verbs. The essay is divided into four sections:

- Basic sentence types
- Implicit objects
- Interaction with body part suffixes
- Conclusion

2 Basic sentence types

Two kinds of basic sentences can be constructed using body-directed action verbs: reflexive sentences like in (1), and transitive sentences like in (2). Reflexive sentences lack an object, while transitive sentences have an object in the accusative case.

(1) Reflexive sentences:

a. kusu x̱ Eddie x̱
   kus =u x̱ Eddie =(a)x
   shave =D2 Eddie =v2
   ‘Eddie is shaving (himself).’

b. la’stāx’idu x̱ Shelly x̱
   la -(x)’sta -(x)’id =u x̱ Shelly =(a)x
   go -liquid -BEC =D2 Shelly =v2
   ‘Shelly bathed (herself).’

(20191205-RDC VF)

c. lus’andu x̱ Shelly x̱
   lus -(k)’an -(x)’id =u x̱ Shelly =(a)x
   uncover -body -BEC =D2 Shelly =v2
   ‘Shelly got undressed.’ or ‘Shelly undressed (herself).’

(20191205-RDC VF)

2 This suffix is realized as -uł after plain resonant consonants {m, n, l, y, w} and elsewhere as -wgl.

3 Accusative case is marked with =x in the third person. First and second person pronouns in the accusative include gaxaŋ ‘first person ACC’, gaxaŋ’s ‘first person plural inclusive ACC’, gaxaŋu ‘first person plural exclusive ACC’, and loł ‘second person ACC’.

4 A list of abbreviations used in the analysis of sentences can be found at the end of this paper.
d. la’mux Shelliya’x ku’tsox’id
l(a) =’m =ux Shelly =(a)x ku’x -isaw -(x)’id -a
AUX =VER =D2 Shelly =V2 dress -in -BEC -A
‘Shelly got dressed.’ or ‘Shelly dressed (herself).’

(20191205-RDC VF)

e. la’uwx ku’xwa’tisudux Monica’x
lq =’m =ux ku’x -wal -isaw -(x)’id =ux Monica =(a)x
AUX =VER =D2 dress -REV -in -BEC =D2 Monica =V2
‘Monica is undressing.’

(20200622-VB VF)

(2) Transitive sentences:

a. ku’sux Eddie’gux gugame’x
kus =ux Eddie =(a)x =x =u(’)s gugame’ =(a)x
shave =D2 Eddie =V2 =ACC =3.REFL.POSS face =V2
‘Eddie is shaving his face.’

(20191205-RDC VF)

b. lu’x Shelliya’x la’stax’i chu’x Simon’x
l(a) =ux Shelly =(a)x la -(’)sta -(x)’id =x =ux Simon =(a)x
AUX =D2 Shelly =V2 go -liquid -BEC =ACC =D2 Simon =V2
‘Shelly bathed Simon.’

(20181127-MC VF)

c. la’amxo’o’x Shelliya’x lus’and
l(a) =’m =xa =ux Shelly =(a)x lus -(k)’an -(x)’id
AUX =VER =ADD.FOC =D2 Shelly =V2 uncover -body -BEC
chu’x Monica’x
=’x =ux Monica =(a)x
=ACC =D2 Monica =V2
‘Then Shelly undressed Monica too.’

(20191205-RDC VF)

d. la’amxo’o’x ku’tsox’i
l(a) =’m =xa =ux ku’x -isaw =x Moni
AUX =VER =ADD.FOC =D2 dress -in =ACC Monica
‘Then she dressed Monica too.’

(20191205-RDC VF)

e. la’u’u’u’u’u’u ku’xwa’tisud chu’x Moni
lq =’m =an ku’x -wal -isaw -(x)’id =x =ux Moni =x
AUX =VER =1 dress -REV -in -BEC =ACC =D2 Moni =V2
‘I am undressing Monica.’

(20200622-VB VF)

The reflexive sentences in (1) all describe situations where the subject of the sentence does something to their own body. Note that there are no reflexive object pronouns (‘himself’, ‘herself’, ‘myself’, etc.) in the Kwakwala sentences.5 While reflexive sentences lack a grammatical object,

5 There is only one reflexive pronominal in Kwakwala, =u(’)s=i(t’)s, the third person reflexive possessive pronoun, which is exemplified in (2a) and (3). The only other reflexive-like element in the language is a predicate, ku’w’lis- “to do something oneself”, which is used in approximately the same situations as intensive pronouns in English.
speeches understand them as having an implicit object corresponding to the subject’s body or body part (this is discussed in Section 3).

The transitive sentences in (2) all have an overt object in the accusative case which specifies where the action is directed. There are several possibilities when it comes to the semantics of the object in transitive sentences.

With all of the verbs in Table 1, the object in a transitive sentence can refer to a person who is distinct from the subject. This is exemplified in (2b), (2c), (2d), and (2e) above. In (2b), for instance, the object is ɠux Simon ‘Simon (ACC)’.

With the verbs dix’id ‘to wipe’, kusa/kus’id ‘to shave’, and t̓su̱xwa/t̓su̱xw’id ‘to wash’, the object in a transitive sentence can also refer to a body or body part. This can either be the subject’s own body or body part as in (2a) above and (3a) and (3b) below, or can be the body (4a) or body part (4b) of a being distinct from the subject.

(3) Subject’s body (part) as object:

a. l’a’mux Shelliya’x Sheliya’x ɠis’
   l(a) =’m =u’x day -(x)’id =u’x Shelly =la’(a)x =x =i(’s)
   AUX =VER =D2 wipe -BEC =D2 Shelly =V2 =ACC =3.REFL.POSS
   gwikwine’
   gwikwine’
   body
   ‘Shelly wiped off her body.’ (20191205-RDC VF)

b. kusu’x Shelliya’x ɠis’
   kus =u’x Shelly =la’x =x =i(’s)
   shave =D2 Shelly =V2 =ACC =3.REFL.POSS
   leg
   ‘Shelly is shaving her legs.’ (20191205-RDC VF)

(4) Other being’s body (part) as object:

a. l’a’mux Shelliya’x dix’i’dix Shelliya’x Sheliya’x ɠis’
   l(a) =’m =u’x day -(x)’id =u’x Shelly =la’(a)x =x =i(’s)
   AUX =VER =D2 wipe -BEC =D2 Shelly =V2 =ACC =3.REFL.POSS
   Moni
   ‘Shelly wiped off Monica’s body.’ (20191205-RDC VF)
   ca

b. kusu’x Shelliya’x ɠis’
   kus =u’x Shelly =la’x =x =u’x gugama’yeys
   shave =D2 Shelly =V2 =ACC =D2 face =V2 =3.POSS
   ‘Shelly is shaving Eddie’s face.’ (20191205-RDC VF)

The distinction between objects referring to the subject’s body part versus a non-subject’s body part is indicated by using different possessive determiners and is not marked on the verb.

The verbs la’st’i’d ‘to bathe’, tus’and ‘to undress’, kux̂so ‘to get dressed’, and kux̂walsud / kux̂amulsud ‘to undress’ cannot take objects referring to body parts. Sentences like those in (5) with kux̂tsud ‘to get dressed’ are judged as ungrammatical.
Context: Eddie is hanging out in his underwear when the doorbell rings. He puts clothes on his bottom half to answer the door.

*ḵuxtsudi* Eddie ʼi’s gugwa’yu
\[\text{dress} \text{-BEC} =\text{D3} \text{ Eddie} =\text{ACC} =\text{3.REFL.POSS} \text{ leg} \]
\[\text{PREP} =\text{3.REFL.POSS} \text{ go} =\text{NMZ} \text{ do} =\text{BEC} =\text{ACC} \text{ door} \]

Intended: ‘Eddie dressed his legs to go open the door.’

Speaker’s comment: “You would say *ḵuxsidzandi Eddie* (‘Eddie put his pants on.’).”

(20200614-JN JF)

Two verb roots from Table 1, *ḵuxw*- ‘wash’ and *dāy*- ‘wipe’, cannot be used to form plain reflexive sentences like those exemplified in (1). When read out to Kwakwala speakers, the sentences in (6) do not sound like complete sentences.

(6) Reflexives with *ḵuxw*- and *dāy*- no body part suffix:

a. *tšuxw’idi* Simon
\[\text{wash} =\text{BEC} =\text{D3} \text{ Simon} \]

Literally: ‘Simon washed.’

Speaker’s comment: “What did he wash?”

(20200614-JN JF)

b. *dix’idi* Monica
\[\text{wipe} =\text{BEC} =\text{V2} \text{ Monica} =\text{V2} \]

Literally: ‘Monica wiped.’

Speaker’s comment: “For example, you could say *dida* (‘to face-wipe’).”

(20200614-JN JF)

According to the speaker, the problem with the sentences in (6) is that it is not clear what Simon washed in (6a), or what Monica wiped in (6b). This is because unlike the other verbs in Table 1, the verbs *tšuxw*, *tšuxw’id* ‘to wash’ and *dix’id* ‘to wipe’ can be used to describe actions directed at objects other than the body. For instance, the verbs *tšuxw* and *tšuxw’id* can also be used to describe washing things like salmonberries (7), clothes, or dishes, while *dix’id* can also be used to describe wiping different kinds of surfaces, such as floors (8), windows, or tables.

(7) *lāmisux* *tšuxw’i* ʼyada *kāmdzākw* 🍓
\[\text{AUX} =\text{VER} =\text{and.so} =\text{D2} \text{ wash} =\text{BEC} =\text{ACC} =\text{D4} =\text{DET} \text{ salmonberry} \]

‘They washed the salmonberries.’

(20160722-MC VF)
To construct reflexive sentences with *tšuχw-* and *dgy-* verbs that refer to body-directed actions, the verb requires a body part suffix in order to make it clear for the listener what is being washed or wiped (see the speaker’s comment for (6b)). Body part suffixes will be discussed in Section 4.

In summary, the verbs in Table 1 can be used to form both reflexive and transitive sentences, with *tšuχw-* and *dgy-* being exceptional when it comes to forming reflexives. All the verbs in Table 1 can take accusative objects referring to persons distinct from the subject, while a few of the verbs can also take objects referring to particular body parts. Something to note about the basic sentences discussed in this section is that there is no marking on the verb to differentiate reflexive sentences from transitive sentences. In this respect Kwakwala differs substantially from neighbouring Salish languages, in which intransitive and transitive sentences are distinguished from each other by suffixes on the verb.

3 Implicit objects

Reflexive sentences lack grammatical objects. Nevertheless, when a listener hears one of the sentences in (1), he or she will still form an understanding of which body or body part the action is directed at. In other words, reflexive sentences have implicit objects.

In reflexive sentences with some of the verbs in Table 1, the implicit object can receive a default interpretation. For instance, in reflexive sentences with the verbs *kusa* and *kusi’d* ‘shave’, the implicit object is typically understood to be the subject’s face (9).

(9) Reflexive sentence with kus’id, face as implied object:

<table>
<thead>
<tr>
<th>lux</th>
<th>kus’idux</th>
<th>Eddiyax</th>
<th>latlux</th>
</tr>
</thead>
<tbody>
<tr>
<td>l(a) =ux</td>
<td>kus -(x)’id =ux</td>
<td>Eddie =(a)x</td>
<td>la =tl =ux</td>
</tr>
<tr>
<td>AUX =D2 shave -BEC =D2</td>
<td>Eddie =V2 go =FUT =D2</td>
<td></td>
<td></td>
</tr>
<tr>
<td>lax</td>
<td>Gwa’dzi</td>
<td></td>
<td></td>
</tr>
<tr>
<td>la =x</td>
<td>Gwa’dzi</td>
<td></td>
<td></td>
</tr>
<tr>
<td>PREP =ACC Port.Hardy</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

‘Eddie is shaving (implicit: his own face). He’s gonna go to Port Hardy.’

(20181127-MC VF)
In transitive sentences with *kusa* and *kus′id*, when the accusative object refers to a person distinct from the subject, it is this person’s face, more specifically, which is typically understood to be the target of the action (10).\(^6\)

\[(10) \text{ Transitive sentence with *kus′id* face as implied object:} \]

\[
\begin{array}{cccccc}
\text{kus′idu} & \text{Eddiyax} & \text{ku} & \text{Billx} & \text{k′isu}x \\
\text{kus} & -(x)′id & =u & \text{=(a)x} & \text{=}u & \text{Bill} & =\text{(a)x} & \text{k′is} & =u \\
\text{shave} & \text{-BEC} & \text{=}D & \text{Eddie} & \text{=}V & \text{=}AC & \text{=}D & \text{Bill} & \text{=}V & \text{NEG} & \text{=}D \\
\text{thu′gm} & \text{kotre}la & \text{thu} & =′m & \text{kotl} & -(a)la & \text{really} & \text{=VER} & \text{know} & \text{-CONT} \\
\end{array}
\]

‘Eddie shaved Bill (understood: Bill’s face). He (Bill) doesn’t really know how.’

(20181127-MC VF)

Rather than being a rigid property of each verb, the interpretation of implicit objects is shaped to some extent by the context sentences are spoken in. For instance, in a context where we know that Shelly is shaving her legs, a speaker might say *kusux Shelliyux* ‘Shelly is shaving’, and a listener would understand the implicit object to be Shelly’s legs. In other words, while implicit objects may be interpreted in a particular way by default, this rule of interpretation is not rigid; the way implicit objects are understood by listeners is also shaped by the context the sentence is uttered in.

In reflexive sentences with the verbs *la′stx′id* ‘to bathe’, *lus′gnd* ‘to undress, get naked’, *kuyt′uds* ‘to get dressed’, and *kuygmuli′txud/kuywgltsno* ‘to undress’, the implicit object (what is ‘bathed’, ‘undressed, or ‘dressed’)) in a reflexive is the subject’s whole body. For instance, the interpretation of sentence (1b) with *la′stgax′id* ‘to bathe’ is that Shelly bathed her whole body.\(^7\)

The remaining verbs *tsuywa, tsuyw′id*, and *dix′id* cannot be used to form plain reflexive sentences, and thus do not take implicit objects. The body part that is targeted by washing or wiping action must be specified overtly — either by using a body part suffix on the verb, or by expressing an overt grammatical object.

In situations where it is necessary to clarify what the target of a body-directed action is, Kwa̱kwa̱lə speakers have two strategies available to them: they can either make the object explicit using a transitive sentence, or they can use a body part suffix on the verb. This second strategy is discussed next.

### 4 Interaction with body part suffixes

Kwa̱kwa̱lə has a set of suffixes which refer to body parts. Some body part suffixes are listed in Table 2, along with notes about their phonology and example derivations.

---

\(^6\) In work with modern speakers, I have only come across uses of *kusa* and *kus′id* with the meaning ‘to shave’. However, it is possible that the verbs *kusa* and *kus′id* can occur in a wider range of contexts with different implicit objects, especially since these words are given the more general translation ‘to scrape off (scales), to scrape with sharp knife’ in Boas (1948:270).

\(^7\) The original meaning of the verb *la′stax′id* seems to be tied to the traditional Kwa̱kwaka′wakw practice of bathing in open water, though at least some modern speakers also use this verb to describe bathing indoors.
Table 2: Examples of body part suffixes

<table>
<thead>
<tr>
<th>Suffix</th>
<th>Translation</th>
<th>Phonology</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>-(g)am</td>
<td>‘face’</td>
<td>Loses initial g after non-resonant consonants</td>
<td>/kus-/ + /-(g)am/ + /-(x)’id/ → [kusam] ‘to face-shave’</td>
</tr>
<tr>
<td>-ilba</td>
<td>‘nose’</td>
<td>Softens a previous consonant</td>
<td>/'isuxw- + /-ilba/ → [’isugwilba] ‘to nose-wash’</td>
</tr>
<tr>
<td>-(x)’isana</td>
<td>‘hand, arm’</td>
<td>Loses initial x after non-resonant consonants</td>
<td>/‘ix- + /-(x)’isana/ + /-(g)la/ → [’igtsanala] ‘to be on hand’</td>
</tr>
<tr>
<td>-(g)it(a)</td>
<td>‘body’</td>
<td>Loses initial g after non-resonant consonants</td>
<td>/day- + /-(g)it(a)/ → [dagita] ‘to body-wipe’</td>
</tr>
<tr>
<td>-(k)’an</td>
<td>‘body’</td>
<td>After a non-resonant consonant, this suffix loses its initial k; then, either the non-resonant consonant hardens or a glottal stop is realized</td>
<td>/lus- + /-(k)’an/ + /-(x)’id/ → [lus’and] ‘to undress, get naked’</td>
</tr>
<tr>
<td>-’stu</td>
<td>‘eye’ or ‘round opening’</td>
<td>The initial glottal stop is sometimes missing</td>
<td>/’mux- + /-’stu/ + /-(x)’id/ → [’muxstud] ‘to strike in eye’</td>
</tr>
</tbody>
</table>

Verbs describing actions directed at the body constitute one domain within the language where body part suffixes occur quite often. Body part suffixes contribute meaning to the predicate in a few different ways.

To begin with, the verb lus’and ‘to undress, get naked’ is made up of a verb root, lus-, together with the body part suffix -(k)’an ‘body’ (see Table 2). Without a body part suffix, the verb does not refer specifically to a body-directed action. This is because the verb root lus- has a more abstract meaning. It is translated as ‘to uncover’ or ‘to open curtain or roof’ in Boas (1947:357), and the word lus’id (/lus-/ + /-(x)’id/) can refer to clouds opening up and exposing a clear sky (First Voices 2009). One of the functions of body part suffixes, then, is in creating body-directed action verbs such as lus’and.

Verbs formed from the roots kus- ‘shave’, dgy- ‘wipe’, and ’isuxw- ‘wash’ can refer to a body-directed action whether or not they have a body part suffix. When a body part suffix is present on the verb, it functions to specify which region of the body the action is directed towards. In reflexive sentences, body part suffixes specify a region of the subject’s body (11).

---

8 Regarding the difference between -(g)it(a) and -(k)’an Boas (1947:357) writes: “Fundamentally, -(k)’an seems to indicate a long body, particularly its surface; -(g)it a round body as a whole. The distinction is not always clear. In some cases, either form may be used [as with, for example,] ’isux’wandi or ’isuxwi’id ‘to wash body’.”
Reflexive sentences with body part suffixes:

a.  luḵ kusəmdux Eddiyəx
l(ə) =uX kus -(g)əm -(x)’id =uX Eddie =({ə})x
AUX =D2 shave -face -BEC =D2 Eddie =V2
‘Eddie shaved his face.’

b.  l’a’mi Monica gwal la’sta’x’ida l’a’am
l(ə) =’m =i Monica gwal la -(’)sta -(x)’id -a l(ə) =’am
AUX =VER =D3 Monica stop go -liquid -BEC -A AUX =VER
’walas digitabidu kwəlis’ma
’walas dəy -(g)ət(ə) =bidu kwəlis =’m =a
big/very wipe -body =DIM do.oneself =VER =A
‘Monica finished taking a bath. Then she dried herself off.’
Literally: ‘Then she wiped off her body, by herself.’

(20181127-MC VF)

A more literal English translation of the Kwak’wala verbs in these sentences would be ‘face-shave’ (11a), ‘body-wipe’ (11b), ‘nose-wash’ (11c), ‘hand-wash’ (11d), ‘face-wash’ (11e), and ‘body-wash’ (11f).

9 In examples (11d), (11e), (11f), (13d), (13e), (13f), and (16a), the verb root ʔəsəw- ‘wash’ undergoes CV reduplication along with reduction of the stem vowel. I do not know the meaning associated with this particular type of reduplication.
Verbs with body part suffixes can also be used to form transitive sentences with the same sorts of objects we saw in Section 2. In (12a), the object refers to the subject’s body, while in (12b), the object refers to the body of a person distinct from the subject.

(12) **Transitive sentences with body part suffixes, body (part) as object:**

a. la’mu xa̱ digita xu’s ukwine’x

   l(α) =’m =ux day -(g)it(α) =x =u(’)s ukwine’ =αx

   AUX =VER =D2 wipe -body =ACC =3.REFL.POSS body =v2

   ‘She wiped her body off.’

b. lu xa̱ Shelliya xa̱ digita xu xa̱ Shelliy =αx

   l(α) =ux Shelly =αx day -(g)it(α) =x =ux

   AUX =D2 Shelly =V2 wipe -body =ACC =D2

   ukwine’αx Simon

   ukwine’ =αx =s Simon

   body =v2 =3.POSS Simon

   ‘Then Shelly wiped off Simon’s body.’

A more literal English translation of (12a) would be ‘She body-washed her own body’, and of (12b) would be ‘Then Shelly body-wiped Simon’s body’. Note that the body part which serves as the target of the action in these sentences is mentioned twice — once by the suffix, and again by the accusative object.

Transitive sentences with the roots kus- ‘shave’, day- ‘wipe’, and ṣuṣy-w- ‘wash’ which include a body part suffix can also have an accusative object that refers to a person other than the subject. In these sentences, the body part suffix specifies the part of the object’s body that the action is directed towards (13).

(13) **Transitive sentences with body part suffixes, person object:**

a. la’mu xa̱ Eddiy xa̱ kusam’d xu xa̱

   l(α) =’m =ux Eddie =αx kus -(g)am -(x)id =x =ux

   AUX =VER =D2 Eddie =V2 shave -face -BEC =ACC =D2

   Bill =αx

   ‘Eddie shaved Bill’s face.’

b. lu xa̱ Shelliya xa̱ digita xu xa̱ Simon xa̱

   l(α) =ux Shelly =αx day -(g)it(α) =x =ux Simon =αx

   AUX =D2 Shelly =V2 wipe -body =ACC =D2 Simon =V2

   ‘Shelly wiped Simon down [after a bath].’

c. ṣuṣywilb xa̱ Shelliya xa̱ Monica

   ṣuṣy -ila =ux Shelly =αx =x Monica

   wash -nose =D2 Shelly =V2 =ACC Monica

   ‘Shelly washed Monica’s nose.’

(20181127-MC VF)
d. ̀tsusḵwx武士₃anux Shelliyaⱽ xus
CV~ tsuxw -(x)tsana =uⱽ Shelly =(ⱽ)ⱽ =ⱽ =u(’)s
RED~ wash -hand =d₂ Shelly =v₂ =ACC =2.POSS
xʷanukw Monica
xʷanukw Monica
child Monica

‘Shelly is washing her child Monica’s hands.’

(20191205-RDC VF)

e. ɬuⱽ Shelly ̀tsusḵwxam xus Simonⱽ
l(ⱽ) =uⱽ Shelly CV~ tsuxw -(ⱽ)an =ⱽ =uⱽ Simon =(ⱽ)ⱽ
AUX =d₂ Shelly RED~ wash -face =ACC =d₂ Simon =v₂

‘Shelly washed Simon’s face.’

(20181127-MC VF)

f. ɬa’mⱽ ɬabⱽ ̀tsusḵwxan gaⱽan
l(ⱽ) =m =ⱽ ɬabⱽ CV~ tsuxw -(k)an =ⱽ gaⱽan
AUX =VER =1.POSS mother RED~ wash -body 1.OBJ

‘My mother washed me (my body).’

(20140324-RDC VF)

A more literal translation of the sentences in (13) would be: ‘Eddie face-shaved Bill’ (13a), ‘Shelly body-wiped Simon’ (13b), ‘Shelly nose-washed Monica’ (13c), ‘Shelly hand-washed her daughter, Monica’ (13d), ‘Shelly face-washed Simon’ (13e), and ‘My mother body-washed me’ (13f). In these sentences, the body part that serves as the target of the action is only mentioned once, in the suffix on the verb.

The sentences in (14) show three alternative ways of using a transitive sentence to describe the same situation, where Shelly washes Monica’s nose. In (14a), the verb lacks a body part suffix and ‘Monica’s nose’ is the object; in (14b) the verb has a body part suffix and ‘Monica’ is the object; and in (14c), the verb has a body part suffix and ‘Monica’s nose’ is the object. An analogous pattern is exemplified in (15), this time with the verb kus- ‘to shave’.

(14) Transitive sentences without (a) and with (b)–(c) body part suffixes: tsuxw-

a. tsuxw’idux Shelliyaⱽ xanḍazes Monica
   tsuxw -(x)’id =uⱽ Shelly =(ⱽ)ⱽ =ⱽ xanḍas =s Monica
   wash -BEC =d₂ Shelly =v₂ =ACC nose =3.POSS Monica
   ‘Shelly washed Monica’s nose.’

(20191205-RDC VF)

b. ̀tsugwilbux Shelliyaⱽ Monica

The factors which cause speakers to choose one of the sentences in (14–15) over the others are not well understood. In many contexts, it seems that the three forms can be used interchangeably. Recall from Sections 2 and 3 that the verb roots tsugw- ‘wash’ and dag- ‘wipe’ are exceptional when it comes to forming reflexive sentences. When constructing transitive sentences with these verb roots, body part suffixes are optional. However, when constructing reflexive sentences with these verb roots, a body part suffix is required on the verb in order to make it clear for the listener what part of the body is being washed or wiped, as exemplified in (16).

(16) Reflexives with tsugw- and dag-, with body part suffix:

| a. | tsutsaŋwamdi Simon
|  | CV~ tsugw -(g)am -(x)’id =i Simon
|  | RED~ wash -face -BEC =d3 Simon
|  | ‘Simon washed his face.’ (20200614-JN JF)

| b. | di’studux Monica
|  | day -’stu -(x)’id =uχ Monica = (a)χ
|  | wipe -eye -BEC =d2 Monica =v2
|  | ‘Monica wiped her eye.’ (20200614-JN JF)

The remaining verbs in Table 1 — lastg’id ‘to bathe’, kugwiṣud ‘to dress’, kugamulti, kugwaltso, kugwaltṣud ‘to undress’ — all refer to actions directed at the whole body. To date I have not asked Kwakwala speakers whether these verbs can take body part suffixes; all I can say is that I have never encountered these verbs taking body part suffixes in elicitation. Given that these verbs
do not take body parts as objects (Section 2), I would predict that they cannot take body part suffixes either.

5 Conclusion

Verbs describing body-directed actions in Kwak'wala are broadly similar in their grammar. These verbs can all be used to construct both reflexive sentences and transitive sentences, with the caveat that 'tsugwa, 'tsugw'id, and dix'id require a body part suffix to form a reflexive that refers to a body-directed action. Table 3 summarizes the types of sentences encountered in this essay and classifies them into types.

</tr>
</tbody>
</table>

Reflexive sentences lack an object and receive an interpretation where the subject is directing the verbal action towards an implicit object. The implicit object in reflexive sentences always corresponds to the subject’s body or a part of their body. Some verbs impose a default reading on an implicit object in reflexives while others do not, with context helping to shape the interpretation of implicit objects. Transitive sentences have an object marked in the accusative case and describe actions directed at this object. The object may correspond to the subject’s own body or body part, or to the body or body part of a person distinct from the subject. Kwak'wala does not mark the difference between reflexive and transitive sentences on the verb, differing from nearby Salish languages in this regard.

At least some body-directed action verbs can take suffixes referring to body parts. When present on the verb, body part suffixes specify the location on the body where the action of the verb is directed. In reflexive sentences this location is necessarily on the subject’s body, while in transitive sentences, this location is on whichever body the object refers to. In transitive sentences, the target of the action can be specified by using an overt object, by using a body part suffix, or by using both devices simultaneously.
